

**LEGEND**

 Depiction superimposed on ground surface of approximate horizontal extent of groundwater below the ground surface at any depth containing hexavalent chromium [Cr(VI)] concentrations exceeding 32 micrograms per liter (µg/L) based on Fourth Quarter 2014 Sampling Event.

**Note:**  
 In the floodplain area, the 32µg/L line for Cr(VI) in the deep zone (80-90 feet below the Colorado River) is estimated based on available groundwater sampling, hydrogeologic and geochemical data. There are no data confirming the existence of Cr(VI) under the Colorado River.
